

About Maxxam Analytics

Maxxam Analytics is the largest, multi-disciplinary, analytical services company in Canada. For over 30 years Maxxam Analytics has been supplying critical analytical support services to the environmental, food, industrial, government and oil and gas industries. We believe that the diversity of our science is a Maxxam advantage in solving the complex detection problems of our clients and mitigating their risk.

Services and Accreditation

Maxxam holds accreditation for specific tests and matrices as it relates to environmental, industrial (oil & gas), food, forensic and genetic identification analysis. This accreditation is registered with such agencies as Standards Council of Canada, the Canadian Food Inspection Agency, USDA, Ministère de l'environnement et de la faune, QMI (ISO 9002 – Alberta and ISO Guide 17025). We are also certified in many US states for a comprehensive list of air, source emission and environmental specialty organic tests including dioxins and nitrosamines.

- **Soil, Water & Air Analysis** – includes trace organic and inorganic testing, microbiological analysis, toxicity evaluations, HRMS analysis for Dioxins/Furans and nitrosamines, Ambient air monitoring programs, air shed studies, stack emission and CEM.
- **Food Testing** – Includes food chemistry and microbiology, nutritional labeling, customer complaints, residue analysis and detection.
- **Industrial Services** – Petroleum fluid analysis, core analysis, compressed gas purity testing, ambient air monitoring, stack emission testing, field services and special projects (lab set-up and technology transfer).
- **Forensic Analysis** – Pre-employment and safety sensitive position testing for drugs and alcohol, forensic specimen analysis, criminal casework; DNA analysis and equine testing.
- **Genetic Identification** – Human parentage verification for paternity, immigration and estate settlement. Animal genetic programs for breed registry and performance trait marker analysis.
- **Contract Lab Management** – Operation and management of lab facilities that are part of an industrial complex.
