

YEAR 2010 CCIL CORRELATION

IGNITION FURNACE GENERAL INSTRUCTIONS AND DATA REPORT FORMS

The following samples have been forwarded to your laboratory:

Material **A-IGCF-#** (Five samples)

Material **A-IGMF-#** (Two samples)

Asphalt Cement **A-IGAC-#** (One sample)

A) Ignition Furnace: Reference Procedure LS-292, Rev. No. 24

- 1) While furnace is at room temperature calibrate the furnace balance as described in the furnace manual provided by the manufacturer.
- 2) Set the combustion temperature of 540°C (deemed appropriate for this type of sample) or as indicated for Irradiation type furnace.
- 3) Set the start time (Auto Timer) so that the furnace is at the specified run temperature (see 2) above) for at least 60 minutes before starting the burn of the first sample of the day.
- 4) Set the furnace endpoint to 1.0g (LS-292)

B) Sample Preparation

Correction Factor (A-IGCF-#) Samples:

- 1) Five sample bags containing approximately 1500g of mixed aggregates and one sample of asphalt cement are supplied
- 2) Aggregates are to be dried prior to mixing.
- 3) A clean mixing bowl will be buttered by mixing a separate sample of HMA (not supplied). The bowl will be scraped clean of this buttering mix prior to mixing the five samples supplied.
- 4) Mixing temperature for the correction factor samples is 140°C.
- 5) Weigh and record the dried aggregate sample.
- 6) Based on this weigh add sufficient asphalt cement (supplied) to produce a mix containing 5.00%, **A-IGAC-#** (based on total mix).
- 7) Mix the sample as indicated in LS-261, Rev. No. 19.
- 8) Transfer the mixed sample to a metal tray, spread it out, cover with metal foil and allow it to cool to ambient temperature.
- 9) Sample is now ready for testing.
- 10) Five samples are provided. Calibration Factor shall be determined from 3 of the 5 samples according to LS-292, Rev 24, Rev. No. Section 4.2.3

Premixed A-IGMF-1-# Samples:

- 1) Two sample bags containing approximately 1500g of **A-IGMF-#** are supplied and are ready for testing. Determination of moisture content is not required.

C) Ignition Furnace Run:

- 1) Weigh the lid, sample tray, catch pan and retaining bracket on the laboratory balance (TABLE 1 – for **A-IGCF-#** (Correction Factor) samples and TABLE 3 – for **A-IGMF-#** (HMA) samples)
- 2) Preheat the sample to be tested to 110°C±5°C (i.e. sufficiently warm to handle). Do not heat for more than one hour.

YEAR 2010 CCIL CORRELATION

- 3) Place catch pan under sample tray and spread sample evenly on the tray.
- 4) Place lid over sample tray and secure lid, tray and catch pan with the retaining bracket.
- 5) Weigh total assembly on the laboratory balance and record the mass to 0.1g (TABLE 1 – fo A- IGCF-# samples and TABLE 3 – for A-IGMF-# samples)
- 6) Calculate sample mass (C in both TABLE 1 and TABLE 3)
- 7) Enter the sample mass C in the furnace data system.
- 8) Place the assembly in the preheated furnace and close the door.
- 9) Heat the sample at the specified temperature (540°C) until the difference between consecutive mass loss measurements does not exceed requirements for three one minute intervals.
- 10) Record sample mass after ignition (from data tape) (TABLE 1 – F for A-IGCF-# samples and TABLE 3 – F for A- IGMF-# samples).
- 11) Remove the assembly from the furnace and allow to cool to ambient temperature and weigh to the nearest 0.1g (TABLE 1 – E for A-IGCF-# samples and TABLE 3 – F for A-IGMF-# samples).
- 12) Record required data from tapes in TABLES 1 and 3 for A-IGCF-# and A-IGMF-# samples respectively.

NOTE: LABORATORIES SHOULD TAKE CAUTION REGARDING NEGATIVE CALIBRATION FACTORS. A LARGE NEGATIVE CALIBRATION FACTOR SUGGESTS THAT THE ASPHALT CEMENT HAS NOT BEEN COMPLETELY BURNED DURING THE IGNITION RUN.

D) Ignited Aggregate Gradation

- 1) Carefully transfer the total residue after ignition to a weighing pan and weigh to the nearest 0.1g.
- 2) Proceed with the washed gradation as described in LS-292, Rev. No. 24
- 3) Laboratories shall complete the attached work sheets (Tables 1-4) and submit copies of the output tapes from the ignition furnace runs.

All test results shall be reported by e-mail in the designated spaces on the (MS-Excel) Ignition Furnace Report form (listed separately on CCIL Web Site). An example of a completed report form is shown on page 3.

The completed Ignition Furnace Report form shall be e-mailed to ibullen@ccil.com by **January 8, 2010**.

Hard copies of the report forms and work sheets (including Tables 1-4) must be submitted by **January 8, 2010** by mail or courier to:
